PLANTASTIC

PLANT CARE GUIDE

DESCRIPTION

I want to create a website that houses a database for how to care for multiple different kinds of plants. The home page will have either different categories of plants (like succulents vs houseplants) or a gallery of featured plants. Users will be able to search for different plants and see a thumbnail-like container with an image of the plant and the most pertinent information (like watering, sunlight, etc.). When it's clicked, it will go to the specific page for that plant with more in-depth information about the plant and how to take care of it. I'd like to implement a profile system where users can favorite plants or add plants that they have, but I'll have to think about that implementation more. If I go that route, it could also be worth adding a community feature where users can comment on plants and troubleshoot care. I'm thinking about using the database from Trefle or Plant.id, but I need to research more into available databases. I'm also thinking about using Wix to save a bit of time since there will likely be many webpages.

THUMBNAILS

Name: Monstera

Sunlight: Some

Watering: Yes

Name: Aloe Vera

Sunlight: Yes

Watering: Some
